Re: EPA Identification Number KST210010609

Dear Mr. McMahon:

Your facility previously notified the U.S. Environmental Protection Agency on EPA Form 8700-12 that you are a Kansas hazardous waste generator and treatment, storage and disposal facility. As you might be aware, Kansas received Interim Authorization on September 17, 1981, to conduct the state hazardous waste program in lieu of the federal program. Therefore, based upon your letter dated May 17, 1982, we have acted on and amended your status.

Your facility is now considered a small quantity generator. As a small quantity generator, your firm is subject to reduced federal and state hazardous waste regulations. The requirements are given in Title 40 Code of Federal Regulations Part 261.5. A copy of the regulations is attached for your information. Kansas has adopted these regulations by reference; however, the state's small quantity generator limit is only 100 kilograms and/or 1 kilogram of acutely hazardous waste per month, while the limit in the federal regulations is 1000 kilograms and/or 1 kilogram of acutely hazardous waste.

If, sometime in the future, you begin to regularly generate quantities of hazardous waste that are fully regulated, we request that we be informed of your change in operation before you use your EPA Identification Number. Additionally, should your facility become a transporter and/or a treatment, storage, or disposal facility which is required to have a permit under Section 3005 of the Resource Conservation and Recovery Act (RCRA) because of quantity, process and/or regulatory changes, an amended Notification of Hazardous Waste Activity (EPA Form 8700-12) and, if appropriate, a completed RCRA Part A (EPA Forms 3510-1 and 3510-3) and Part B Application must be submitted to the Kansas Hazardous Waste Management Section. A permit must be issued for the storage, treatment, or disposal facility prior to its construction or operation.
